

**Do you have Polycystic Ovarian Syndrome (PCOS)?**

**Would you like to know more about your fertility potential, such as if you are ovulating?**

**If so, you are invited to take part in a Mount Sinai Fertility study. Potential participants will meet a clinician to discuss menstrual cycles, PCOS and fertility, and their eligibility for the study.**

This study will help researchers determine whether having PCOS affects how receptive the uterus is to pregnancy. They aim to improve fertility outcomes for women.

# You are eligible for this study if you:

- Are female, 21-38 years of age
- Aren't pregnant or actively trying to get pregnant
- Have been diagnosed with PCOS or think you have PCOS.
- Have menstrual bleeding (period) less often than every month.
- Are not using a birth control pill or intrauterine device (IUD)
- Are not a smoker

Study participants will have blood tests and pelvic ultrasounds performed periodically during two menstrual cycles and to have a Uterine Fluid Aspiration on two visits per cycle.
